

FLINT SEWER COLLECTION SYSTEM & PUMP STATION

INFRASTRUCTURE IMPROVEMENT

New sewer lines and a pump station are being constructed to service the Flint Commerce Center.

The wastewater collection system expansion includes construction of about 1 mile of new gravity sewer lines and about .5 miles of force main.

WHY?

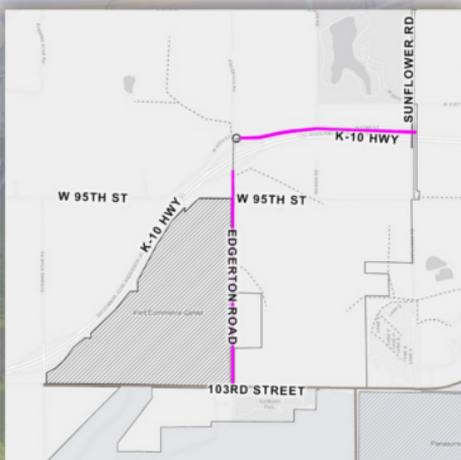

This project is needed to accommodate the growth of the Flint Commerce Center and the surrounding area.

A pump station, also known as a lift station, is a crucial part of a sewage system. Its main function is to pump wastewater from a lower to a higher elevation, especially when the gradient of the terrain does not allow for a natural flow.

As the area expands, there is an increased demand for wastewater services. The construction of a new pump station, along with additional sewer lines, will ensure that the wastewater collection system can handle the growing needs of the community. Additionally, by expanding the system, the project will help the city comply with federal and state regulations regarding wastewater management.

WHERE?

The new gravity sewer line will be located along Edgerton Road between K-10 and 103rd Street. The new forcemain will be located along the north side of K-10 from Edgerton Road to Sunflower Road.

WHEN?

The project started in October, 2022, and is expected to be completed in Fall 2024.

PROJECT TEAM?

- Owner: City of De Soto
- Developer: Flint Development
- Engineer: BHC
- Contractor: TBD

FUNDING

Panasonic, reimbursed through a TIF agreement
