

NEW WATER TOWER

INFRASTRUCTURE IMPROVEMENT

Construction of a new Elevated Water Storage Facility with a capacity of 2 million gallons per day (MGD)

WHY?

The new water tower is being built to ensure that De Soto has a reliable water supply to support new industry and development. As the city grows with residential, commercial, and industrial developments, there is an increasing need for a dependable water supply. The new water tower will provide several benefits:

- Ensuring an adequate water supply for daily use
- Maintaining reliable water pressure during peak usage times, such as early morning and evenings
- Providing enough water for emergency situations, such as firefighting

Additionally, by constructing this new water tower, De Soto will maintain control over its water supply, ensuring that the community is not reliant on external sources for drinking water.

WHERE?

The new water tower will be located on the north side of 103rd Street and east of the Lexington Avenue intersection.

It is north of the Astra Enterprise Park.

WHEN?

The new water tower is currently in the engineering design phase, and the anticipated completion is 2025.

PROJECT TEAM?

- Owner: City of De Soto
- Engineer: HDR
- Contractor: TBD

FUNDING

Panasonic, reimbursed through a TIF agreement
